the finality of the office action, mailed 3/25/02, is hereby withdrawn. Applicants' amendment, filed 6/5/02, has been entered.

Applicants' arguments, filed 6/5/02, have been fully considered but they are not deemed to be persuasive. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. Upon reconsideration, the following rejections and/or objections are either reiterated or newly applied. They constitute the complete set presently being applied to the instant application.

Claims 1-5, 38, and 42-49 are rejected, as discussed below, under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, line 5, the parameter "M" is utilized but without being defined anywhere in the claim. Thus, this claim 1 and those dependent therefrom are vague and indefinite.

In claim 1, last two lines, the carboxamide residues are defined by their chemical names as utilized in the polyamide that is designed in the claimed method. The carboxamide residue given as "Hp", however, lacks such definition due to the apparently incomplete phrase "Hp is" in said last two lines. Thus, this claim 1 and those dependent therefrom are vague and indefinite.

Art Unit: 1631

Claim 49, line 1, indicates that the therein claimed polyamides are designed by the method of claim 1. Consideration of the polyamides as defined by the structure and parameters therein in claim 49 reveals that the structure defines polyamides that would not be designed via claim 1. One clear polyamide structure which does not come from a claim 1 design is the polyamide that is characterized by the parameter "a" being 0. is noted that all polyamides designed in claim 1 contain a y residue, but such a residue is present in the claim 49 structure only if parameter "a" is 1. Additionally, when parameter "a" in claim 49 is 1, the corresponding residue is a butyric acid type of residue if parameter "n" is 2. It is noted that the γ residue designed in claim 1 is a butyric acid type of residue and not another acid residue type. If parameter "n" is set to 1 in the structure of claim 49 then the residue therein is a propionic acid type of residue which is nowhere in the design of claim 1. Thus, claim 49 is vague and indefinite regarding indicating that the polyamides therein claimed are designed via the claim 1 design due to including polyamides where cannot be designed via the method of claim 1. A third unclarity exists in comparing claim 1 designs versus claim 49. In claim 1 there appears to be only one y residue in each designed polyamide. In claim 49, the parameter "c" may be from 2 to 10. This parameter determines the number of residues in the "a" portion of the structure which

Serial No. 09/372,474 - 4 - Art Unit: 1631

appears to be the y residue number also. Thus, the polyamides of claim 49 with a y residue therein (that is, a = 1) will have from 2 to 10 of y residues therein. With 2 - 10 of these y residues, none of the structures of claim 49 will have only 1 y residue as designed in claim 1. Clarification is requested as to what is meant by this statement in claim 49, line 1, versus the structures therein compared to the polyamides designed in claim

No claim is allowed.

1.

Papers related to this application may be submitted to Technical Center 1600 by facsimile transmission. Papers should be faxed to Technical Center 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform with the notices published in the Official Gazette, 1096 OG 30 (November 15, 1988), 1156 OG 61 (November 16, 1993), and 1157 OG 94 (December 28, 1993) (See 37 CAR § 1.6(d)). The CM1 Fax Center number is either (703)308-4242 or (703)305-3014.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arden Marschel, Ph.D., whose telephone number is (703)308-3894. The examiner can normally be reached on Monday-Friday from 8 A.M. to 4 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Woodward, Ph.D., can be reached on (703)308-4028.

Any inquiry of a general nature or relating to the status of this application should be directed to Patent Analyst, Tina Plunkett, whose telephone number is (703)305-3524 or to the Technical Center receptionist whose telephone number is (703) 308-0196.
